Welcome To Karaka Farms Sheep Master Ram Sale

It is with great excitement that we welcome you to Karaka Farms in the Tuki Tuki Valley for the first draft of our SheepMaster two-tooth rams for sale.

Karaka Farms is a family-owned sheep and beef operation in Hawkes Bay owned by Mike and Susan Hunsberger. Fanie has been managing this property for the past 11 years, having originally moved from South Africa with a strong interest in New Zealand agriculture.

Our farming journey has always been driven by a desire to produce high-quality, functional livestock that can perform in a commercial environment. Alongside our SheepMaster stud, we are also establishing a Brangus stud, building on Fanie's particular passion for beef cattle, especially Brahman and Angus genetics.

When we established our SheepMaster flock, we started with a strong Wiltshire base but wanted to introduce greater meat, bone, growth and overall performance. This led us to look further afield for genetics that would complement our existing flock and take our breeding programme to the next level.

This is where we crossed paths with Neil Garnett of the SheepMaster Parent stud in Australia. After seeing the sheep they were breeding, we knew these were the genetics we had been looking for. The combination of bone, muscle, growth and shedding ability aligned strongly with our vision for the future of our flock.

Our breeding philosophy is centred around producing fertile, structurally sound, easy-care sheep with the performance and quality to truly impress the market. We place a strong emphasis on ethical and sustainable farming practices, with regenerative agriculture at the forefront of how we manage our land and livestock.

Our breeding objective is to produce shedding sheep with good bone, meat and growth, strong maternal traits and sound structure, while retaining the fertility and functionality required in a commercial flock. We also believe these genetics have the potential to produce excellent terminal sires where increased carcass performance and growth are the priority.

We are proud to present our first draft of SheepMaster two-tooth rams and to share the progress of our breeding programme with you.

Thank you for taking the time to consider our rams. We look forward to welcoming you to Karaka Farms and wish you all the very best for the sale.

Fanie Erasmus

Conditions of Sale

This sale will be conducted under the Conditions of Sale of the New Zealand Stock and Station Agents. A copy can be provided upon request or found online. All lots are sold exclusive of GST.

Stud Ram Transfer: SheepMaster rams purchased for registered SIL recorded breeding operations will attract a minimum bid of $2,000.

Health & Safety: Visitors are reminded of the health and safety regulations and requested to follow instructions and take all care and responsibility for all actions while on the property.

Commission: A 6% rebate is offered by PGG Wrightson to all approved non-participating livestock companies and recognised independent livestock agents with approved credit facilities introducing and/or accompanying buyers to the sale.

Insurance: All rams become the buyer's responsibility at the fall of the hammer. We strongly recommend insuring your rams.

Selling order: Rams will enter the ring in fours and will be sold in catalog order.

Disclaimer: While all care and responsibility has been taken by the vendors and agents, no responsibility can be taken for any errors or omissions in the provided information.

CONTACT: FANIE ERASMUS | 021 292 4846

AGENT: ANDREW HOLT | 027 396 3311

Genetic Indexes and Abbreviations Explained

The indexes explained below are economic values, measured in cents. E.g. a ram with a NZMW index of 2500 is equivalent to 2500 cents or $25. His progeny inherits half his genetics or $12.50. If he has 100 progeny, he generates $1250 for the farm business in that year compared with an average ram in 1995 with a zero index.

INDEXES

MW+W New Zealand Maternal Worth + Meat. An industry standard index for dual purpose sheep based on reproduction, lamb survival, lamb growth, meat and adult ewe size indexes.

DPG Dual purpose lamb growth. A function of pre-weaning growth, ewe milking ability, post weaning growth and carcass weight.

DPR Dual purpose reproduction. The economic value of more lambs per year, per 2-Tooth and older ewes. Based on number of lambs born (NLB).

DPS Dual purpose lamb survival. A function of lamb vigour at birth and ewe mothering ability.

DPM Dual purpose meat. A function of meat yield measured through EMA scanning.

DPA Dual purpose adult size. A function of an adult ewe liveweight BV (EWT). Heavier ewes are penalised as have greater feed demand.

BREEDING VALUES

IMFBV Dual purpose adult size. A function of an adult ewe liveweight BV (EWT). Heavier ewes are penalised as have greater feed demand.

SHEDBV Shedding breeding value. Breeding value based on the lamb shedding scores, with higher values indication better/earlier shedding.

ACTUAL DATA

WWT Actual weaning weight (kg).

LW8 Actual live weight at eight months of age (kg).

EM/LW Eye muscle area to live weight ratio (%).

IMF Intramuscular fat score (1=low, 5=high).

MYOMAX GDF8 double muscling gene. One copy of the gene indicates 5% more muscling, and two copies indicates 10% more muscling.

B/R Birth and rearing rank.

Sires Used

The two SheepMaster sires that have been used in this cohort of Karaka rams are Monarch (7738.384/19) and Masterbuild (7738.599/22) from the SheepMaster Parent Stud. Both are sound, solid rams that have great carcass, meat and bone characteristics. Both rams are registered under the Sheep Genetics genetic evaluation in Australia. Because of this, the records for these rams in the New Zealand SIL evaluation are limited to the progeny that have been born here to these rams.

Monarch has been used extensively for multiple years now, with progeny records giving an accurate indication for his genetic merit.

Masterbuild has been used across multiple flocks in 2025 and 2026. Therefore, he has fewer progeny records making up the information presented. Additionally, as the oldest progeny are only one year old now, some traits (i.e. ewe reproduction) have not been recorded yet on his progeny in New Zealand. The data presented on these two rams is valid for their progeny, but comparing the data between sires should be done with caution.

We are really happy with how the progeny of both rams have turned out, especially in respect to their meat and growth traits. Monarch carries a copy of the double muscling MYOMAX gene, which has come through in some of the rams in this catalogue. We are looking forward to seeing the next crop of lambs grow over the next year.

The ewes that have been brought into the stud were a mix of commercial Wiltshire ewes, with some having Mt Cass genetics. These ewes were predominantly selected based on their structure and soundness.

MASTERBUILD

MONARCH
